- » Main: 8.12m²
- » Jib: 3.30m²
- » Gennaker: 10.60m² (option)
- » PY: 1095

The first Rota-moulded keel boat and the reason we choose the boat from our range was because of the beautiful hull shape which really suited this concept which was designed for hiking with the incredible beam measuring in at 2m wide, which makes for a very comfortable, spacious and uncluttered cockpit. This impressive design allows the crew to easily control the Xenon XK1 which has a smaller rig from the standard Xenon for ease of handling with the keel version.

Topaz Xenon XK1 is equipped with a weighted Daggerboard (keel) with a 35kg torpedo bulb which really enhances the stability and makes it virtually impossible to capsize in normal sailing conditions (force 3 to force 5). The hull has an elegant chine design to further enhance her outstanding stability. The boat is fitted with the Gnav system (kicker system) which increases cockpit space by 20% and reduces clutter even further.

The Xenon XK1 comes with a smaller rig which uses a Dacron mainsail with built in single-line reefing system allowing the performance to be changed out on the water to suit a wider variety of skill levels.

Topper's unrivalled TRILAM construction is used again here, meaning the boat will stand up to all the stresses of training and racing and is virtually maintenance free. It comes with a weighted keel (45kg), epoxy Rudder blade and the highest specification equipment is fitted as standard.

Topaz Xenon XK1 (keel boat) is the perfect platform for teaching 3-4 students in a club environment and it is also perfect for getting your friends or partners into sailing for fun or for club racing. Topaz Xenon XK1 offers unbelievable value for money in comparison to many other club keel boats.
